

Igor Stureyko

AI Architect | ML Team Lead | Data Scientist | ML Engineer

 igor-stureiko  stureiko@gmail.com  +7(916)156-07-82  +7(916)156-07-82

SKILLS

Python (OOP, Pandas, NumPy, SciPy, sklearn) • Matlab

SQL (MySQL, PostgreSQL)
ClickHouse, MongoDB

Linux • $\text{\LaTeX}$ • Shell

Neural networks
TensorFlow • PyTorch

AI agents • GAN
LangChain • LangGraph

RL • Transformers
OCR • Time series

AWS • Athena • Lambda
SageMaker • ECS • EC2 • S3
YandexCloud • Terraform
Kubernetes

MLOps • LLMops
Apache Airflow
SparkML • MLFlow
DVC • Weights&Biases
KubeFlow • Katib • KServe

Git • Docker

A/B-tests

EDUCATION

LOMONOSOV MOSCOW STATE UNIVERSITY

PHD THEORETICAL PHYSICS

1995 - 2003

Faculty of Physics

Moscow, Russia

PHILIPPS UNIVERSITÄT

PHYSICS

2002 - 2003

Faculty of Physics

Marburg, Germany

Over 20 years of experience leading software development and machine learning projects in applied mathematics, data engineering, ML pipelines, and AI-driven systems. Proven track record in team leadership, solution architecture, and large-scale industrial deployments.

EXPERIENCE

AI ARCHITECT | ML TEAM LEAD DM-SOLUTIONS | RUSSIA

2024 – н.в. | remote

- Designed industrial predictive analytics systems;
- Designed AI assistants for industrial and production engineering workflows;
- Design of an AI subsystem for developing predictive models;
- Led model development and training teams;
- Designed infrastructure for ML model deployment and production operations;
- Adapted solutions to comply with FSTEC Russia security requirements;

INSTRUCTOR | COURSE DIRECTOR | OTUS

2023 – now | remote

- Course Director for Reinforcement Learning course;
- Course Director for Quantitative Finance course;
- Course Director for Machine Learning courses (ML Basic, ML Professional);
- Course Director for MLOps (production deployment of ML models);
- Teaching areas include:
 - AI architecture;
 - AI agents in production;
 - Machine learning;
 - Reinforcement learning;
 - Time series analysis;
 - Cloud infrastructure;
 - Quantitative finance analysis;
 - Algo trading;
 - Python OOP.

QUANTATIVE ML ENGINEER | TEAM LEAD | (CONFIDENTIAL UNDER NDA)

2022 – 2024 | remote

- Led a team developing recommendation systems for algorithmic trading;
- Automated ETL processes;
- Built data pipelines for ingesting streaming and transactional data;
- Conducted A/B testing for trading strategies.

EXPERIENCE

CHIEF TECHNICAL OFFICER | LLC NIIGAZECONOMIKA

2020 – 2022 | Moscow, Russia

- Partnered with product team to build a production recommendation engine in Python that reduced manual engineering workload by more than 50%;
- Automated ETL processes across millions of rows of data, which reduced manual workload more than 50% monthly;
- Built data pipeline for ingesting streaming and transaction data across 4 different primary data sources;
- Support implementation and active monitoring of controls and programs to improve operational efficiency and accuracy for technical teams;
- Built an ML model to optimise the allocation of resources in the pipeline system during repair work;
- Evaluation of the economic efficiency of implementing technical projects: risk assessment, feasibility assessment, investment effectiveness;
- Project life-cycle management from setting tasks and developing technical specifications to implementation at the customer's site and support during the operation stage together with technical support;
- Managed multi-disciplinary projects with a team of 20+ specialists.

HEAD OF DEPARTMENT | LLC NIIGAZECONOMIKA

2012 – 2020 | Moscow, Russia

- Led a team of data scientists and developers to brainstorm potential technical and organisation improvements, and implemented them in customer environments;
- Led a team to solve mathematical problems:
 - Graph optimisation problems (dynamic transport task, max flow min cost, flow transportation networks, optimisation tasks);
 - Hydraulic calculation (hydraulic networks, identification parameters), Probability tasks (Bayes, Markov chain, non stationary Markov chain);
- Built and supported the implementation of ML pipelines using TensorFlow Extend, Apache Airflow;
- Automated department reporting using LaTeX and Python, saving at least 20% of working time.

PROJECTS

DEVELOPMENT OF THE ATOMMIND 2.0 SYSTEM | TVEL ROSATOM JSC | DM-SOLUTIONS

2024 | Moscow, Russia | AI architect

- Development of requirements for the ML solutions life-cycle management system;
- Design of the platform's technical architecture and implementation options;
- Technical architecture of the MLOps stack;
- Development of AI assistants at the production engineer level and at the model creation and management level;
- Integration of the MLOps subsystem into the overall AM 2.0 platform structure;
- Development of the technical implementation of the MLOps subsystem.

OCR SYSTEM FOR TECHNICAL DOCUMENTS | DM-SOLUTIONS

2023 | Moscow, Russia | Team Lead, ML

- Development and automation of ML pipelines for technical text recognition;
- Building pipelines for model quality assurance;
- Model testing and preparation for deployment.

DEVELOPMENT OF A TRADING BOT | CONFIDENTIAL (NDA)

2023 | Confidential (NDA) | ML Team Lead

- Development of ML models for trading strategies;
- Selection of instruments based on risk/return profiles;
- Model testing and preparation for deployment;
- Rollout to production and performance monitoring;

NATURAL GAS CALORIFIC VALUE MONITORING SYSTEM FOR PJSC GAZPROM'S GAS TRANSMISSION SYSTEM | PJSC GAZPROM

2020 | Moscow, Russia | Chief Project Engineer

- Development of requirements for the natural gas calorific value monitoring system;
- Technical assessment of the gas transmission system's readiness for the transition to energy flow metering;
- Optimization of the placement of monitoring equipment;
- Development of technical specifications for new calorimeters;
- Development of an economic model for evaluating efficiency.

INVESTMENT JUSTIFICATION FOR HYDROCARBON EXTRACTION FROM THE YAMAL PENINSULA | GAZPROM PJSC

2018 | Moscow, Russia | Chief Project Engineer

- Development of requirements for the hydrocarbon transportation system and its integration into the existing gas transmission system;
- Optimization of technical solutions for various product types (gas | oil | condensate);
- Assessment of the project's full life cycle;
- Development of technical specifications for the design phase;
- Development of an economic model for evaluating efficiency.

DEVELOPMENT OF A SYSTEM FOR ASSESSING THE TECHNICAL CONDITION OF PJSC GAZPROM'S GAS TRANSMISSION SYSTEM | PJSC GAZPROM

2016 | Moscow, Russia | Lead Engineer

- Development of requirements for a system to assess the technical condition of the gas transmission system and its individual facilities;
- Development of mathematical models of equipment life cycles;
- Forecasting the technical condition and related performance indicators—the scope of major repairs and reconstruction;
- Assessment of risks associated with deviations from scheduled repair and reconstruction deadlines;
- Development of a “on-demand” technical condition management concept.
